

Quad outlet – the new generation of power distribution for highly flexible applications

“Four-in-one” – this is what the new quad outlets that SCHÄFER IT-Systems uses in its new generation of rack PDUs offer.

This ensures flexible power distribution for your IT that meets the future requirements of the market.

The quad outlet can accommodate the four plug types C14, C16, C20 and C22. This flexibility increases efficiency and ensures that your IT power management is sustainable and future-proof.

The advantages for you

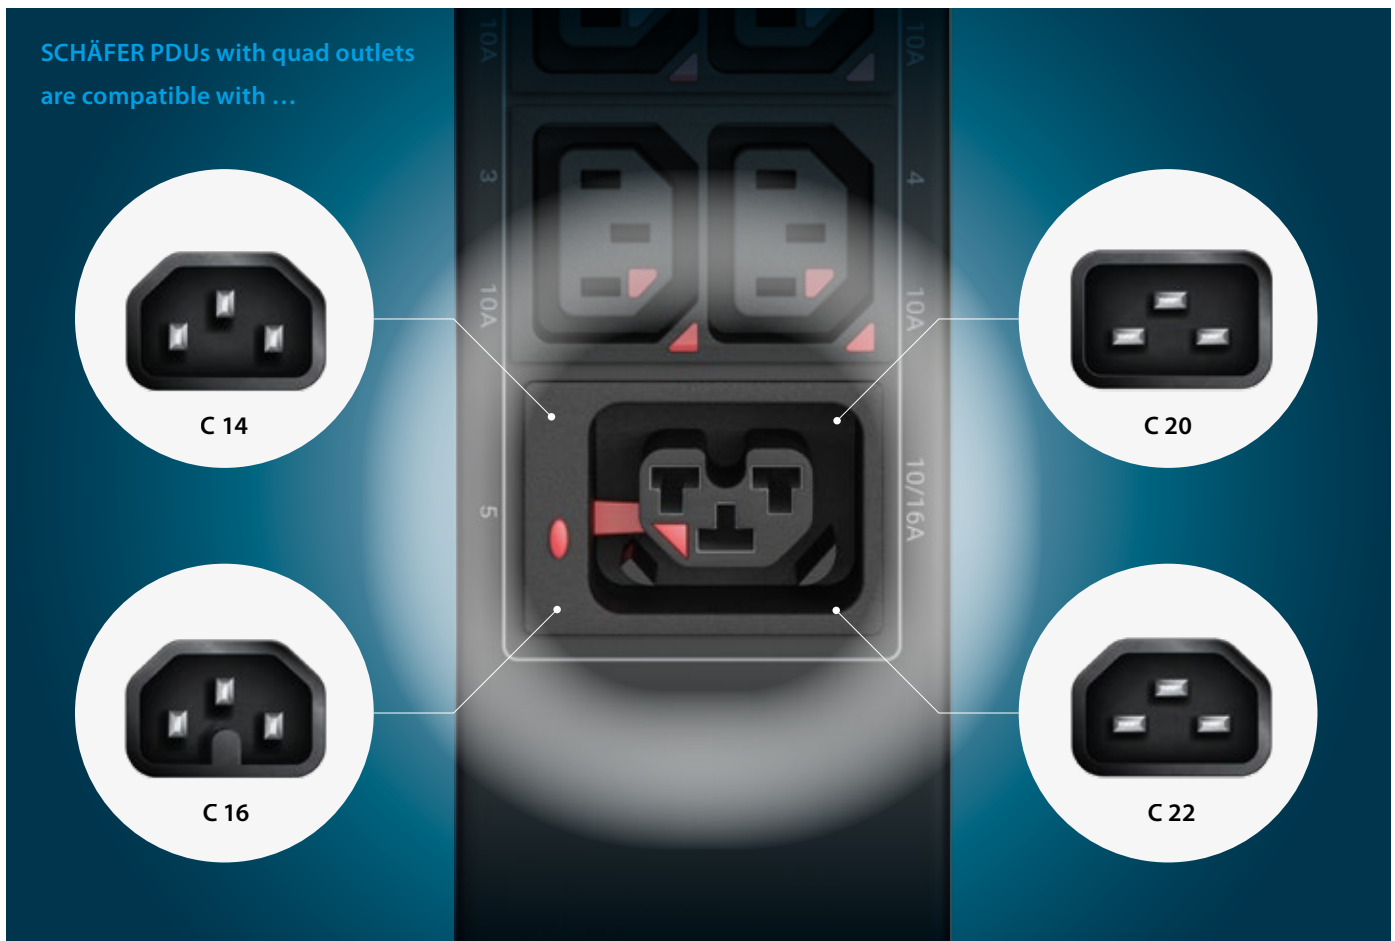

- **Flexibility:** Choice of connector plug and use of any standard cable
- **Sustainability:** Lower energy consumption due to fewer components (e.g. switching relays)
- **Safety:** Integrated locking function works with any standard cable
- **Efficiency:** Reduced number of PDU models and generally fewer outputs per PDU

SCHÄFER IT-SYSTEMS 

Rack PDU with quad outlets – simple and easy to combine

Benefits

- Simplification of the procurement process
- Flexible choice of connector plug possible
- Savings in the overall length to provide more space for active components
- Cost-efficient as fewer outlets are required
- Lower energy consumption due to fewer components (e.g. switching relays)
- Flexible cable management, as devices can be plugged into any of the nearest ports
- Downtimes are reduced
- Increased IT security requirements are taken into account
- Tried-and-tested system from a well-known manufacturer
- Easy release of the cables by pressing a single button
- The IEC lock safety function works with any standard cable

Features

- Combination of four different output types IEC6032 C13, C15, C19, C21
- IEC lock safety function in the standard configuration
